MULTI-BOOM TELE-REMOTE OPERATORS STATION

- Multi-boom tele-remote control station, capable of remotely controlling a fleet of rockbreakers. Each rockbreaker must be equipped with the multi-boom tele-remote local control module. Provides remote control, monitoring, diagnostics, video and audio. The operator can simultaneously monitor the status and availability of a rockbreaker fleet. Facilitates quick rockbreaker selections; the operator can jump between many rockbreaker, allowing him to operate several rockbreakers with little switching delays.
- Located at customer master control center.
- Data transmission via Ethernet TCP utilizing end user's network.

Includes - Operator Controls:

- Ergonomic swivel seat with built-in joysticks. All operator machine interfacing is done via the joysticks, including; rockbreaker movement control, camera pan/tilt/zoom (PTZ) control, and screen cursor control.
- Emergency stop, fire suppression activation switch.
- 10 meter long cable (Mini 7/8") from seat to the visualization station.

Includes - Visualization Station:

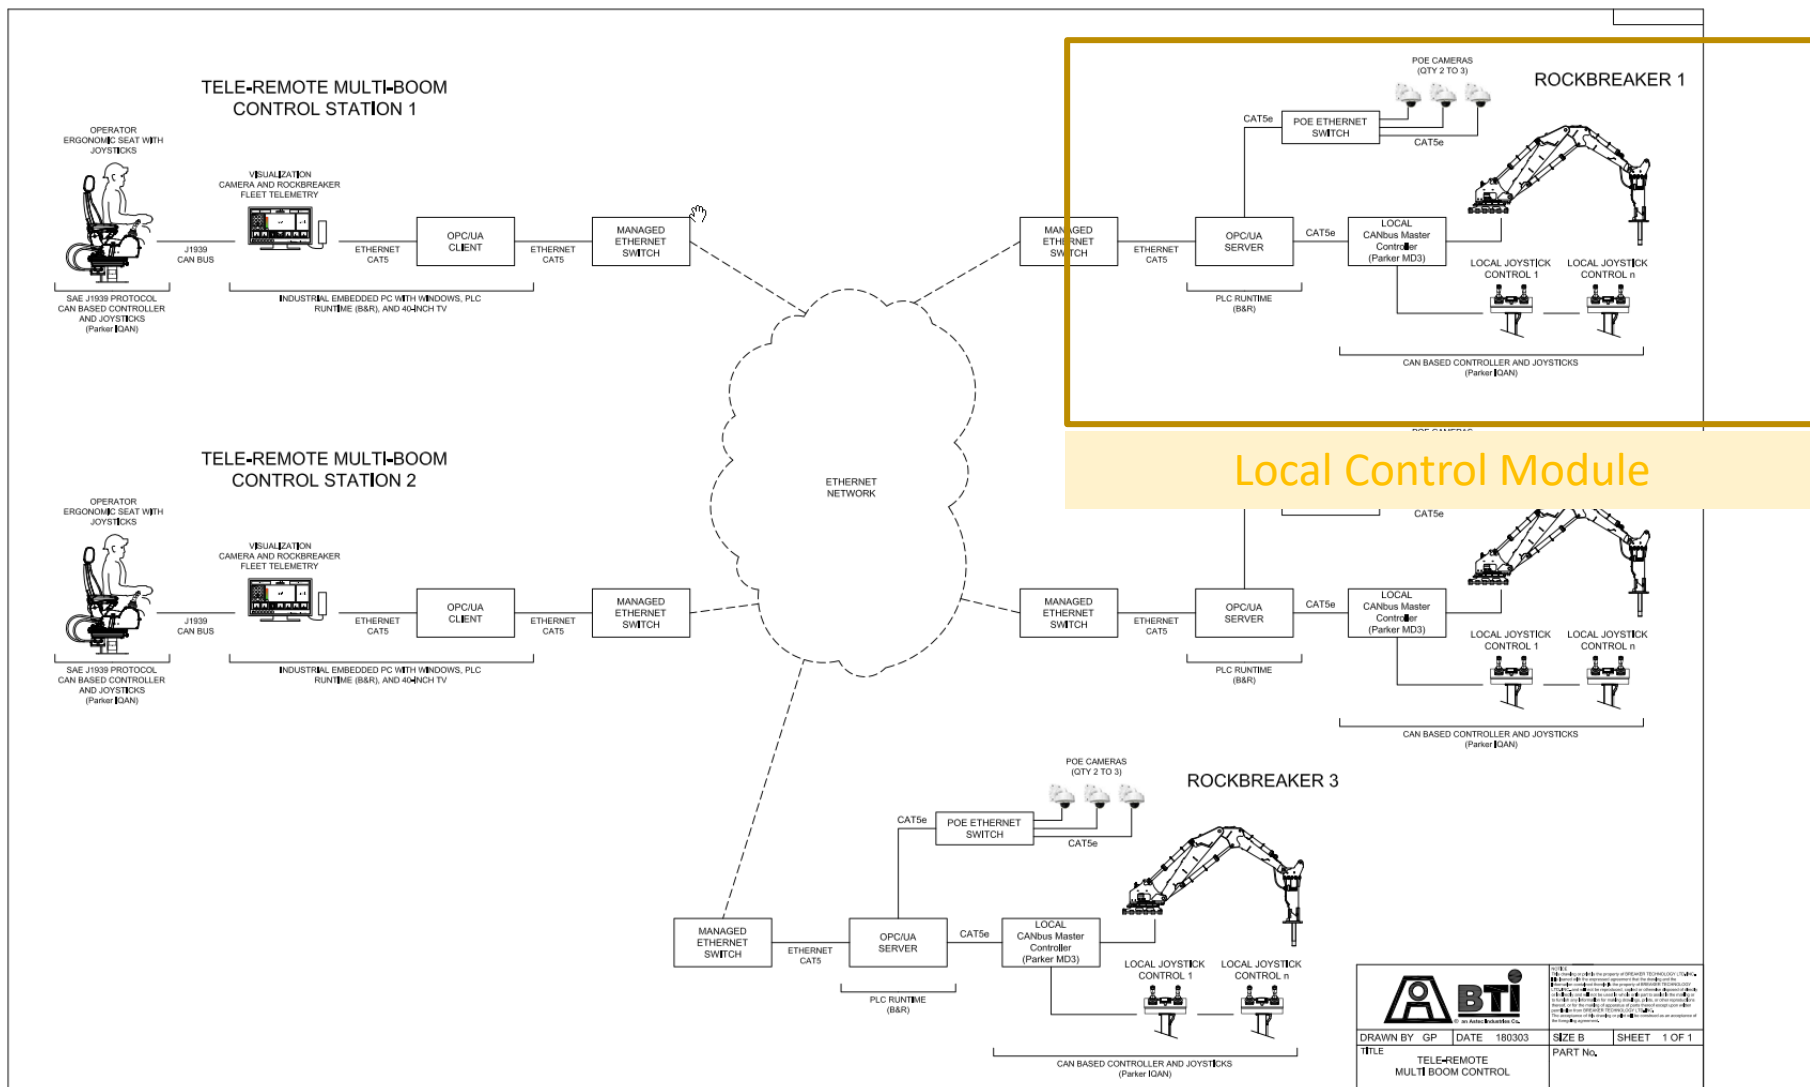

- 40-inch Wide Screen LED monitor for viewing two camera video streams, and rockbreaker telemetry
- TV and control panel stand, keyboard, mouse, 120/240Vac input cable 2.3 meters long (IEC 60320C13), On/off switch, and circuit protection.
- Embedded industrial PC (quad core) with Windows, PLC runtime, and OPC/UA client.
- MOXA Industrial Ethernet router. Two SFP Fiber ports (1000Mbps), and Eight 10/100BaseTX RJ45 Ports. Suitable for harsh environments. Supplied with 1 SFP to LC module which support point to point distance of 10km over single mode glass (9/125µm) fiber optic cable. Consult with regional sales manager for other options.
- This station is to be mounted on customer supplied desk.

Options

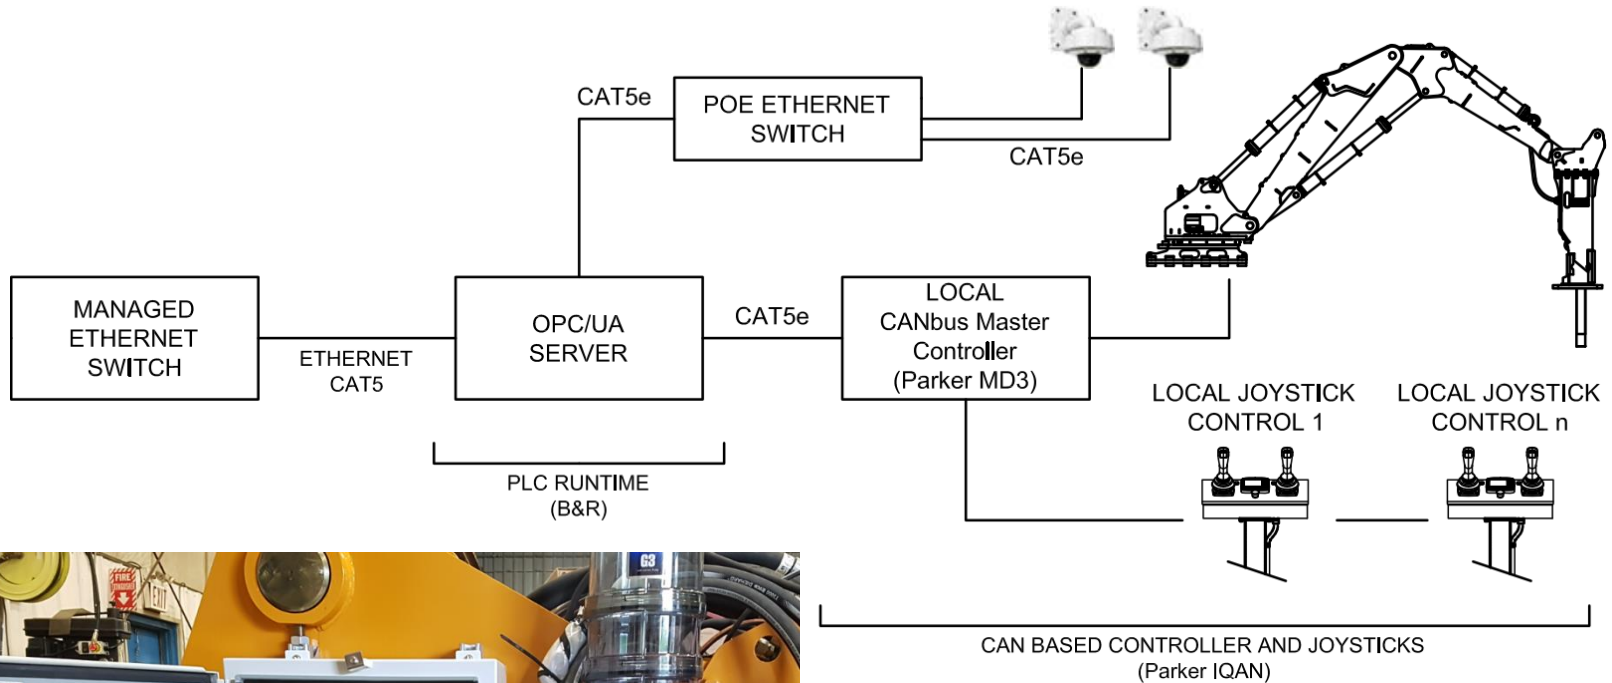

Ethernet Router

- Multi-mode with 1 SFP Duplex module with LC connectors. Supports point to point distance of 2km
- Single-mode with 1 SFP Duplex module with LC connectors. Supports point to point distance of 10km, 30km, 80km, or 120km.

MULTI-BOOM TELE-REMOTE

MULTI-BOOM TELE-REMOTE LOCAL CONTROL MODULE

MULTI-BOOM TELE-REMOTE LOCAL CONTROL MODULE

- This is an upgrade to the existing Electronic CANbus based programmable control system for the addition of Multi-Boom Tele-Remote capabilities.
- PLC with OPC/UA server, Emergency Safety-Relay, Horn, Strobe, Audio module and mic.
- Industrial Ethernet router. Two SFP Fiber ports (1000Mbps), and Eight 10/100BaseTX RJ45 Ports suitable for harsh environments. Supplied with SFP to LC module which support point to point distance of 30km over single mode glass (9/125µm) fiber optic cable. Consult with regional sales manager for other options. Camera system with low latency for remote control application.

Includes - Standard Camera System

- Two Ethernet IP cameras; color, auto focus, auto iris, true PTZ (pan tilt zoom), outdoor rated, manufacturer Axis (P5624-E MKII). 23x optical zoom, 2.9° to 57° field of view. Polycarbonate clear dome.
- Control panel c/w PoE Ethernet Switch dedicated for cameras only.
- Mounting brackets, Ethernet cables (60 meters) and connectors.
- Installation guide provided.
- Installation not included. Done by others.

Multi-Boom Tele-remote - BOSCH Camera Upgrade (optional)

- Camera upgrade from Axis P5624-E MKII to Bosch MIC-7502. Two Ethernet IP cameras; color, auto focus, auto iris, true PTZ (pan tilt zoom), outdoor rated, manufacturer Bosch (MIC-7502). 30x optical zoom, 2.3° to 65° field of view. Exceptional strength and ruggedness for any outdoor application. Integrated wiper, and tempered flat glass.
- Our 'standard' PTZ camera, AXIS (P5624-E MKII) dome style, is robust and outdoor rated. However, being a dome style camera it does not incorporate a wiper, and may be susceptible to accumulate dust in extreme dusty environments. Also camera is only rated to -30°C. We can offer an upgraded camera which incorporates an integrated wiper, as well as rated to -40°C; this is the Bosch (MIC-7502). This wiper runs without water, and is effective at removing dust and water. Additionally, this Bosch camera has a tempered flat glass, in place of the polycarbonate clear dome on the AXIS camera, which is less susceptible to scratches.
